1.0 New or Maintenance

Maintenance

1.1 Measure Structure

Single Measure

1.3 Electronic Clinical Quality Measure (eCQM)

No

1.6 Measure Description

Percentage of women aged 15-44 years at risk of unintended pregnancy that is provided a long-acting reversible method of contraception (i.e., implants, intrauterine devices or systems (IUD/IUS)).

It is an access measure because it is intended to identify very low rates (less than 1-2%) of long-acting reversible methods of contraception (LARC), which may signal barriers to LARC provision.

1.7 Measure Type

Structure

1.8 Level of Analysis

Clinician: Group/Practice, Facility, Health Plan

1.9 Care Setting

Other

1.14 Numerator

Women ages 15-44 at risk of unintended pregnancy who were provided a long-acting reversible method of contraception (LARC), i.e., intrauterine device or implant.

1.15 Denominator

Women ages 15-44 at risk of unintended pregnancy.

1.20 Types of Data Sources

Claims Data

6.1.2 Current or Planned Use(s)

Public Reporting

6.1.3 Current Use(s)

Public Reporting

Exclusions

The following categories of women are excluded from the denominator: (1) those who are infecund for non-contraceptive reasons; (2) women who had a live birth in the last 2 months of the measurement year; or (3) women who were still pregnant or their pregnancy outcome was unknown at the end of the measurement year.

Measure Disclaimer

Not applicable.

Planned Use

Public Reporting

Risk Adjustment

No risk adjustment or risk stratification

Target Population

Children, Women
