New

1.6 Measure Description

This electronic clinical quality measure (eCQM) assesses the proportion of inpatient hospitalizations for patients ages 18 years and older at the start of the encounter who suffer the harm of developing a new stage 2, stage 3, stage 4, deep tissue, or unstageable pressure injury.

1.7 Measure Type

Outcome

1.13 Data Dictionary

Not attached. I attest that all information will be provided where codes and/or value sets are needed (1.14a - 1.15c).

1.14 Numerator

Inpatient hospitalizations for patients with a new deep tissue pressure injury (DTI) or stage 2, 3, 4, or unstageable pressure injury, as evidenced by any of the following: •A diagnosis of DTI with the DTI not present on admission; •A diagnosis of stage 2, 3, 4 or unstageable pressure injury with the pressure injury diagnosis not present on admission; •A DTI found on exam greater than 72 hours after the start of the encounter; or •A stage 2, 3, 4 or unstageable pressure injury found on exam greater than 24 hours after the start of the encounter.

1.15 Denominator

Inpatient hospitalizations where the patient is 18 years of age or older at the start of the encounter.
