

Briefly describe the steps between the health care structures and processes (e.g., interventions, or services) and the desired health outcome(s). The relationships in the diagram should be easily understood by general, non-technical audiences. Indicate the structure, process, or outcome being measured.

Attachment (pdf, word)

Cancer patients receiving chemotherapy and radiation therapy may experience pain. Survival is linked to symptom control and pain management, which contribute to broad quality-of-life improvement. (1) Pain management is an essential part of oncologic management and contributes to overall function and quality of life. (1) The diagram above depicts a logic model whereby 1) among cancer patients receiving chemotherapy or radiation, the provider assesses and quantifies their pain; 2) the provider documents a plan of care accordingly, optimizing pain management therapies; 3) the patient experiences improved symptom control, pain management, and overall function; and 4) the patient's quality of life is improved.

*[For maintenance review] Provide evidence of performance gap or measurement gap by providing performance scores on the measure as specified (current and over time) at the specified level of analysis. * Please include mean, standard deviation, minimum, maximum, interquartile range, and scores by deciles. Describe the data source including number of measured entities, number of patients, dates of data. If a sample, provide characteristics of the entities included. If performance scores are unavailable for the measure, please explain.*

The MIPS-Quality program data were retrieved from 2021-2023 performance reports and reflect calendar years 2019-2021. The average performance rates suggest continued room for improvement in practice performance rates. It is important to note that participants are allowed

to self-select measures and may choose those that will result in high performance rates. As a result, performance rates may not be nationally representative.
