Structure

• Systems for providing effective management of in-center hemodialysis via interdisciplinary team

Process

- Identify patients with spKt/V < 1.2
- Explore root causes for low Kt/Vurea (e.g. vascular access, anticoagulation, treatment time, etc)
- Manage dose of dialysis with changes to prescription to maintain appropriate spKt/V

Outcome

• Decrease liklihood of hospitalizations and death

Result

- Improve quality of care
- Increase patient's quality of life
