

CBE 1463: Standardized Hospitalization Ratio for Dialysis Facilities (SHR)

5.1.3 Characteristics of Measured Entities

5.1.3 Characteristics of Measured Entities*

Describe characteristics of measured entities included in the analysis (e.g., number, size, location, type). If you used a sample, describe how you selected measured entities for inclusion in the sample and the representativeness of the sample.

For each year of the four years from 2020-2023 there were 7,999, 8,108, 8,100, and 7,979 facilities, respectively. Facilities had a median caseload of around 60 patients eligible for the SHR measure.

Number of facilities and median facility size by year

Year	Total Facilities	Total Patients	Median Patients Per Facility
2020*	7,999	502,708	62
2021	8,108	499,457	61
2022	8,100	483,041	60
2023	7,979	471,041	60

*The CMS COVID Extraordinary Circumstances Exception (ECE) data policy restricts the use of claims data from March-June 2020.

**All Medicare certified dialysis facilities included in this table, including those with less than 5 patient-years at risk.
