

Table 2. [If accountable entity level testing was conducted, i.e., if 4.2.1 includes “Accountable entity level”]] Accountable Entity Level Reliability Testing Results by Denominator, Target Population Size

Enter overall mean, minimum, and maximum performance scores, along with the count of measured entities and persons/encounters/episodes. Organize entities into deciles by the entity number of persons/encounters/episodes (denominator) from 1 (smallest N) to 10 (largest N). Provide mean reliability, performance score, number of entities (total) and number of persons/encounters/episodes (total) for entities assigned to each decile. For minimum reliability, provide reliability value for the entity with the smallest N. For maximum reliability, provide the reliability value for the entity with the largest N.
