

Relative Resource Use for People With Asthma (RAS)

Description

The relative resource use by members with persistent asthma during the measurement year.

Definitions

Oral medication dispensing event	<p>One prescription of an amount lasting 30 days or less. To calculate dispensing events for prescriptions longer than 30 days, divide the days supply by 30 and round down to convert. For example, a 100-day prescription is equal to three dispensing events ($100/30 = 3.33$, rounded down to 3). The organization should allocate the dispensing events to the appropriate year based on the date when the prescription is filled.</p> <p>Multiple prescriptions for different medications dispensed on the same day are counted as separate dispensing events. If multiple prescriptions for the same medication are dispensed on the same day, sum the days supply and divide by 30. Use the Drug ID to determine if the prescriptions are the same or different.</p>
Inhaler dispensing event	<p>All inhalers (i.e., canisters) dispensed on the same calendar day count as one dispensing event, regardless if they are the same medication or a different medication. For example, two inhalers dispensed on the same day count as one dispensing event. Two inhalers dispensed on different dates of service count as two dispensing events.</p> <p>Allocate the dispensing events to the appropriate year based on the date when the prescription was filled.</p>
Injection dispensing event	<p>Injections count as one dispensing event. Multiple dispensing events of the same medication or a different medication count as separate dispensing events. Allocate the dispensing events to the appropriate year based on the date when the prescription was filled.</p>

Eligible Population

Note: Organizations must report the quality measures (ASM, MMA and AMR) when reporting RAS.

Product lines	Commercial, Medicaid (report each product line separately).
Ages	5–64 years by December 31 of the measurement year.
Continuous enrollment	The measurement year and the year prior to the measurement year.
Allowable gap	No more than one gap in enrollment of up to 45 days during each year of continuous enrollment. To determine continuous enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the member may not have more than a 1-month gap in coverage during each year of continuous enrollment year.
Anchor date	December 31 of the measurement year.
Benefits	Medical. Pharmacy during the measurement year.

**Event/
diagnosis**

Follow the steps below to identify the eligible population for the measure.

- Step 1** Identify members as having persistent asthma who met at least one of the following criteria during both the measurement year and the year prior to the measurement year. Criteria need not be the same across years.
- At least one ED visit (ED Value Set), with a principal diagnosis of asthma (Asthma Value Set).
 - At least one acute inpatient encounter (Acute Inpatient Value Set), with a principal diagnosis of asthma (Asthma Value Set).
 - At least four outpatient visits (Outpatient Value Set) or observation visits (Observation Value Set), on different dates of service, with any diagnosis of Asthma (Asthma Value Set) **and** at least two asthma medication dispensing events (Table ASM-C). Visit type need not be the same for the four encounters.
 - At least four asthma medication dispensing events (Table ASM-C).
- Step 2** A member identified as having persistent asthma because of at least four asthma medication dispensing events, where leukotriene modifiers were the sole asthma medication dispensed in that year, must have at least one diagnosis of asthma (Asthma Value Set), in any setting, in the same year as the leukotriene modifier (i.e., the measurement year or the year prior to the measurement year).

Table ASM-C: Asthma Medications

Description	Prescriptions		
Antiasthmatic combinations	• Dyphylline-guaifenesin	• Guaifenesin-theophylline	
Antibody inhibitor	• Omalizumab		
Inhaled steroid combinations	• Budesonide-formoterol	• Fluticasone-salmeterol	• Mometasone-formoterol
Inhaled corticosteroids	• Beclomethasone	• Flunisolide	• Triamcinolone
	• Budesonide	• Fluticasone CFC free	
	• Ciclesonide	• Mometasone	
Leukotriene modifiers	• Montelukast	• Zafirlukast	• Zileuton
Long-acting, inhaled beta-2 agonists	• Arformoterol	• Formoterol	
	• Salmeterol		
Mast cell stabilizers	• Cromolyn		
Methylxanthines	• Aminophylline	• Theophylline	
	• Dyphylline		
Short-acting, inhaled beta-2 agonists	• Albuterol	• Metaproterenol	
	• Levalbuterol	• Pirbuterol	

Exclusions (required)

- Exclude members who had any diagnosis from any of the following value sets, any time during the member's history through December 31 of the measurement year:
 - Emphysema Value Set.
 - Other Emphysema Value Set.
 - COPD Value Set.
 - Obstructive Chronic Bronchitis Value Set.
 - Chronic Respiratory Conditions Due To Fumes/Vapors Value Set.
 - Cystic Fibrosis Value Set.
 - Acute Respiratory Failure Value Set.

Members with one or more of the following dominant conditions during the measurement year should also be excluded from the measure.

- *Active cancer.* Members who had any diagnosis of cancer (Malignant Neoplasms Value Set; Other Neoplasms Value Set) with treatment (Cancer Treatment Value Set) during the measurement year.
- *Organ transplant (other than kidney).* Organ transplant (other than kidney) (Organ Transplant Other Than Kidney Value Set) during the measurement year.
- *HIV/AIDS.* Members who met any of the following criteria during the measurement year:
 - At least two outpatient visits (Outpatient Value Set), observation visits (Observation Value Set) or nonacute inpatient encounters (Nonacute Inpatient Value Set), on different dates of service, with an HIV diagnosis (HIV Disease Value Set). Visit types need not be the same for the two visits.
 - At least one acute inpatient encounter (Acute Inpatient Value Set) with an HIV diagnosis (HIV Disease Value Set).
 - At least one ED visit (ED Value Set) with an HIV diagnosis (HIV Disease Value Set).
- *ESRD.* ESRD (ESRD Value Set) during the measurement year.
- *Kidney transplant.* Kidney transplant (Kidney Transplant Value Set) during the measurement year.

Categorization of Eligible Population

Major clinical condition Asthma.

Risk group For the resource use measures, the following steps assign each member to a risk group. The steps are implemented after the eligible population is identified. Tables used to classify the eligible population by risk adjustment approach will be released with the SPTs on November 1, 2013

Step 1 Identify the qualified service diagnosis.

Use the following value sets and identify all diagnoses for encounters during the treatment period based on the date of service for outpatient or ED services or on the discharge date for inpatient stays.

- Outpatient (Outpatient Value Set).
- Observation (Observation Value Set).
- Acute inpatient (Acute Inpatient Value Set).
- Nonacute inpatient (Nonacute Inpatient Value Set).
- ED (ED Value Set).
- Surgery and procedure services. Services with a CPT Procedure code in Table HCC—Surg.

Use all diagnosis codes for all services that meet the criteria listed above to complete the steps below.

Step 2 Assign each diagnosis code to one CC category (CC) using Table CC—Comorbid.

Exclude all diagnoses that cannot be assigned to a CC category. For members with no qualifying diagnoses from face-to-face encounters, skip to step 6.

All digits must match exactly when mapping diagnosis codes to the CCs.

Step 3 Determine HCCs for each CC identified. Refer to Table HCC—Rank.

For a member's CC list, match the CC code to the CC code in the table, and assign:

- The ranking group.
- The rank.
- The HCC.

For CCs that do not match to Table HCC—Rank, use the CC as the HCC and assign a rank of 1.

Note: One CC can map to multiple HCCs; each HCC can have one or more CCs.

Step 4 Select only the highest-ranked HCC in each ranking group using the *Rank* column (1 is the highest possible rank).

Drop all other HCCs in each ranking group and de-duplicate the HCC list if necessary.

Step 5 Identify combination HCCs listed in Table HCC—Comb.

Some combinations suggest a greater amount of risk when observed together. Additional HCCs are selected to account for these relationships.

Compare each member's list of unique HCCs to those in the *HCC* column in Table HCC—Comb and assign any additional HCC conditions.

For fully nested combinations, use only the more comprehensive pattern.

For overlapping combinations, use both sets of combinations.

Based on the combinations, a member can have none, one or more of these additional HCCs.

Step 6 Identify demographic HCCs for RRU.

Categorize members by age and gender using the age ranges described in Table RRU—Age/ Gender—HCC. Assign a demographic HCC based on gender and the member's age on the last day of the treatment period.

At the end of step 6, each member will have a final list of HCCs that includes at least one demographic HCC and none, one or more HCCs based on steps 1–5.

Step 7 Calculate the weight for all the HCCs on each member's list using Table RRU—Weight. Each HCC for RRU carries a predefined risk weight.

Step 8 Sum each member's risk weights based on the final list of HCCs. A member's risk score is the sum of the risk weights for all HCCs on that member's list. Sum the weights based on the member's HCC lists. Round the final risk score to four decimal places.

Step 9 Use the table below to assign the member to a risk group based on risk score.

Report all member months and cost information for each member's risk group, within the appropriate age and gender stratifications.

Risk Group	Lower Score	Upper Score	Risk Group	Lower Score	Upper Score
1	0.0000	0.2499	8	2.0000	2.4999
2	0.2500	0.4999	9	2.5000	2.9999
3	0.5000	0.7499	10	3.0000	3.9999
4	0.7500	0.9999	11	4.0000	4.9999
5	1.0000	1.2499	12	5.0000	5.9999
6	1.2500	1.4999	13	6.0000	6.9999 over
7	1.5000	1.9999			

Standard Cost Calculations

The organization reports total standard costs of all services for which the organization has paid or expects to pay for the eligible population during the treatment period. Total standard costs are assigned by matching codes for services rendered to codes listed in the NCQA SPTs (the tables will be posted to NCQA's Web site by November 1, 2013).

Apply standard price SPTs categorize services as follows:

- Inpatient Facility.
- E&M.
 - Inpatient Services.
 - Outpatient Services.
- Laboratory Services.
- Surgery and Procedure.
 - Inpatient Services.
 - Outpatient Services.
- Imaging Services.
- Pharmacy.

Count all services listed in the SPTs rendered to members in the eligible population during the treatment period. Refer to the *Calculating Standard Cost* instructions in the *Guidelines for Relative Resource Use* for steps on categorizing services and linking service data to the NCQA SPTs.

Calculate total cost Sum the total standard cost for each eligible member. For each service category, if a member's standard cost exceeds the service category cap amount, report the total standard cost specified in the NCQA Cost Cap Amounts table (released with the SPTs).

Sum and report the total standard cost for the eligible population in each service category by member cohort.

Service Frequency Calculations

Total service frequency Service frequency counts are reported for all services for which the organization has paid or expects to pay for the eligible population during the treatment period. The measure captures each eligible member's services rendered during the treatment period for the following service categories:

- Acute Medicine: Discharges, Days.
- Acute Surgery: Discharges, Days.
- Nonacute: Discharges, Days.
- ED Discharges.
- Pharmacy Utilization:
 - Name brand only (N1).
 - Name brand—Generic exists (N2).
 - Generic only (G1).
 - Generic name—Name brand exists (G2).

Refer to the instructions in the *Guidelines for Relative Resource Use*. The *Pharmacy Utilization* categories are included in Table SPT—Pharm.

Inpatient Facility This category measures the number of acute and nonacute inpatient facility discharges and days, regardless of diagnosis. Count each discharge once. Include data from any institution that provides acute or long-term/specialty nonacute care.

Refer to *Guidelines for Relative Resource Use* to identify acute inpatient (including medicine and surgery) and nonacute discharges and days.

ED Discharges This category measures use of ED services.

Count each visit to an ED during the treatment period that does not result in an inpatient stay, regardless of the intensity of care required during the stay or the length of stay. Count only one ED visit per date of service. Do not count visits to urgent care centers. Services for members admitted to the hospital from an ED visit are included in the Inpatient Facility category only.

Identify ED visits using either of the following:

- An ED visit (ED Value Set).
- A procedure code (ED Procedure Code Value Set) with an ED place of service code (ED POS Value Set).

**Pharmacy
Utilization**

Use Table SPT-Pharm to identify the prescription categories for each drug dispensed in the treatment period.

Sum and report the number of prescriptions within each of the four categories in the Pharmacy—Total Service Frequency by Prescription Category table.

Data Elements for Reporting
